

**Microsoft Power Platform
Functional Consultant
Study Guide
Exam PL-200**

Table of Contents

1. [Section 1: Introduction](#)

1. [PL-200 Exam](#)

[Understanding role-based certifications](#)

[Job roles](#)

[Exam questions](#)

[Question types](#)

[Performance-based testing](#)

[Introducing Power Platform and Dynamics 365 roles](#)

[Dynamics 365 and Power Platform roles](#)

[The Functional Consultant role](#)

[Role definition](#)

[Key role activities](#)

[Required experience](#)

[Functional Consultant roles](#)

[Exploring the PL-200 exam and its objectives](#)

[Skills measured](#)

ExamLabs

[Configure the Common Data Service \(25-30%\)](#)
[Create apps by using Power Apps \(20-25%\)](#)
[Create and manage Power Automate \(15-20%\)](#)
[Implement Power Virtual Agents chatbots \(10-15%\)](#)
[Integrate Power Apps with other apps and services \(15-20%\)](#)
[Related exams](#)
[Summary](#)
[Questions](#)
[Further reading](#)

2. [Section 2: Microsoft Dataverse](#)

2. [Power Platform](#)

[Introducing Dynamics 365 and the Dynamics 365 apps](#)
[Dynamics 365 apps](#)
[Exploring the Power Platform and its components](#)
[Power Platform components](#)
[Power Apps](#)
[Power Automate](#)
[Power BI](#)
[Power Virtual Agents](#)
[Related components](#)
[Connectors](#)
[Dataverse \(formerly\) Common Data Service](#)
[Common Data Model](#)
[AI Builder](#)
[Understanding Power Platform environments](#)
[Multiple environments](#)
[Environments and databases](#)
[Environment security](#)
[Environment types](#)
[Environment operations](#)
[Administration and maker portals](#)
[The Power Apps maker portal](#)
[The Power Platform administration center](#)
[Microsoft 365 administration center](#)
[Microsoft AppSource](#)
[Summary](#)
[Questions](#)

Further reading

3. Data Modeling

Understanding the Common Data Model

Data definitions in the CDM

The importance of metadata

Open Data Initiative

Introducing the Common Data Service

Benefits of the CDS

Dynamics 365 apps and the CDS

Understanding the technologies used in the CDS

Introducing solutions

Default solution

Common Data Services Default solution

Using custom solutions

Publishers and prefixes

Creating solutions

Components

Solution operations

Changing the data model

Data modeling

Entities

Creating entities

Entity types

Activity entities

Virtual entities

Entity ownership

Other entity properties

Relationships

Creating a one-to-many relationship

Behaviors and cascading rules

Mappings

Creating a many-to-many relationship

Connections

Configuring connection roles

Fields

Data types

Creating a field

ExamLabs

- Option sets
- Calculated fields
- Rollup fields
- Alternate keys
- Summary
- Questions
- Further reading

4. Business Rules

- Introducing business rules
- Using actions in business rules
- Types of action
- Show Error Message
- Set Field Value
- Set Default Value
- Set Business Required
- Set Visibility
- Locking or unlocking a field
- Recommendation
- Combining actions in a business rule
- Using conditions in business rules
- Using the visual rule designer to create and edit business rules
- Finding business rules in the classic portal
- Creating a business rule
- Setting the name of the rule
- Adding conditions to a business rule
- Adding actions to a business rule
- Saving the business rule
- Validating the business rule
- Setting the scope of the business rule
- Copying business rules
- Documenting the business rule
- Navigating complex rules with the mini-map
- Viewing the structure and logic of a business rule with code view
- Activating business rules
- Using business rules
- How scope controls the running of business rules
- Business rule scope and canvas apps

ExamLabs

Understanding the limitations of business rules

Best practices

Summary

Questions

Further reading

5. Classic Workflows

Introducing processes

Classic workflows

Dialogs

Action processes

How processes are triggered

How processes perform work

Check conditions

Wait conditions

Steps

Creating a classic workflow

Process properties

Setting the scope of the process

Setting the options for automatic processing

Settings when the process is available to run

Adding steps to a process

Running a background workflow

Security for background workflows

Running a real-time workflow

Security for real-time workflows

Converting between real-time and background workflows

Activating processes

Creating and using action processes

Built-in actions

Extending processes with custom actions

Monitoring classic workflows

Logs for background workflows

Logs for real-time workflows

Summary

Questions

Further reading

6. Managing Data

ExamLabs

- Importing data from different sources
 - Using the Import Data Wizard
 - Monitoring import data jobs
 - Using data templates
 - Adding sample data
 - Using Import from Excel
 - Using Power Query
- Exporting data
 - Exporting to Excel in model-driven apps
 - Exporting data in the maker portal
- Replicating data to Azure SQL
 - Using Power Automate
- Configuration Migration tool
- Summary
- Questions
- Further reading

7. Dataverse Settings

- Configuring duplicate detection
 - Duplicate detection settings
 - Duplicate detection rules
 - Duplicate detection jobs
- Cleansing data
- Managing data growth
 - Using bulk delete
- Configuring auditing
 - Understanding how auditing works
 - Viewing audit records
 - Managing audit logs
 - Managing audit security
 - Enabling read logging
- Configuring search
- Summary
- Questions
- Further reading

8. Security

- Overview of security features
- Cloud security

ExamLabs

- Securing data with encryption
- Authenticating apps
- Environment security
- Security in the CDS
- Business units
- Security roles
- Access levels
- Business units, users, and security roles
- Creating or modifying security roles
- Assigning multiple security roles
- Roles in model-driven apps
- Roles in other components
- Users and teams
- Users in Microsoft 365
- Users in the CDS
- Record ownership
- Sharing
- Teams
- Owner teams
- Access teams
- Azure AD group teams
- Hierarchical security
- Manager hierarchy
- Position hierarchy
- Field-level security
- Secured fields
- Field security profiles
- Summary
- Questions
- Further reading

3. Section 3: Power Apps

9. Model-Driven Apps

- Introducing model-driven apps
- Creating a model-driven app
- Configuring the site map
- Selecting components for an app
- Sharing a model-driven app

ExamLabs

- Configuring forms and controls
 - Configuring the main form
 - Understanding the form structure
 - Showing related records
 - Adding controls to forms
 - Adding fields to a form
 - Configuring fields
 - Configuring lookup fields
 - Configuring subgrids
 - Configuring the timeline
 - Using quick view forms
 - Using quick create forms
 - Using the card form
 - Using multiple forms
 - Configuring forms for mobile
 - Configuring views
 - Using public views
 - Using system views
 - Customizing a view
 - Sharing personal views
 - Enabling editable grids
 - Creating charts and dashboards
 - Understanding charts
 - Creating a chart
 - Sharing personal charts
 - Understanding dashboards
 - Configuring standard dashboards
 - Configuring interactive experience dashboards
 - Securing dashboards
 - Sharing personal dashboards
 - Understanding reporting options
- Summary
- Questions
- Further reading

10. Canvas Apps

- Introducing canvas apps
- Creating canvas apps

ExamLabs

- Creating an app
- Adding controls to your app
- Understanding what screens are
- Understanding what controls are
- The gallery control
- The button control
- The form control
- Reusable components
- Exploring connectors and data sources
- Using the Common Data Service
- Deploying canvas apps
- App Checker
- Testing an app
- Publishing and sharing an app
- User authentication
- User authorization
- Managing changes
- Limitations of canvas apps
- Performance
- Summary
- Questions
- Further reading

11. Portal Apps

- Introducing portal apps
- Inviting users to the portal
- Creating portal apps
- Creating portals for Dynamics 365 apps
- Administering a portal
- Adding web pages and entity forms
- Exposing data in the portal
- Applying a theme to a portal
- Securing portal apps
- Authenticating a portal app
- Managing entity permissions and web roles
- Summary
- Questions
- Further reading

4. [Section 4: Automation](#)

12. [Power Automate Flows](#)

- [Introduction to Power Automate flows](#)
- [Creating Power Automate flows](#)
- [Ways to create a flow](#)
- [Adding steps to your flow](#)
- [Using input from the previous step](#)
- [Expressions](#)
- [Trigger types](#)
- [Connectors and data sources](#)
- [The Common Data Service connector](#)
- [Available connectors for Common Data Service](#)
- [Triggers for the Common Data Service connectors](#)
- [Common Data Service connector actions](#)
- [Connecting using a service principal](#)
- [Controlling flows with logic and expressions](#)
- [Conditions](#)
- [Loops](#)
- [Variables](#)
- [Administering and monitoring flows](#)
- [Monitoring flows](#)
- [Sharing flows](#)
- [Power Automate checker](#)
- [Summary](#)
- [Questions](#)
- [Further reading](#)

13. [Business Process Flows](#)

- [Understanding business process flows](#)
- [Creating business process flows](#)
- [Adding stages to a business process flow](#)
- [Creating a business process flow for multiple entities](#)
- [Amending the Stage Category option set](#)
- [Adding steps to stages](#)
- [Data steps](#)
- [Action steps](#)
- [Flow steps](#)
- [Classic workflows](#)

- Global workflows
- Conditional branching in business process flows
- Adding a condition
- Connecting stages
- Securing business process flows
- Business process flow performance
- Business process flow considerations
- Forms and business process flows
- Flows and business process flows
- Business rules and business process flows
- Field-level security and business process flows
- Model-driven apps and business process flows
- Summary
- Questions
- Further reading

14. UI Flows

- Technical requirements
- Introducing UI flows
- Types of UI flow
- Use cases for UI flows
- Recording business tasks
- Recording actions
- Editing actions
- Using attended and non-attended flows
- Summary
- Questions
- Further reading

5. Section 5: Power Virtual Agents

15. Creating Chatbots

- Introducing Power Virtual Agents
- Benefits of using Power Virtual Agents
- Use cases for Power Virtual Agents
- Best practices for chatbots
- Creating a chatbot
- Sharing a bot
- Publishing chatbots
- Adding the chatbot to channels

[Adding a chatbot to Microsoft Teams](#)

[Monitoring chatbots](#)

[Summary](#)

[Questions](#)

[Further reading](#)

16. [Configuring Chatbots](#)

[Defining topics](#)

[Configuring topics](#)

[Extracting topics from existing content](#)

[Adding greetings and other system topics](#)

[Configuring entities](#)

[Creating custom entities](#)

[Defining actions](#)

[Using variables](#)

[Summary](#)

[Questions](#)

[Further reading](#)

6. [Section 6: Integrations](#)

17. [Power BI](#)

[Introducing Power BI](#)

[Using data with Power BI](#)

[Using pre-built Power BI apps](#)

[Connecting to the Common Data Service](#)

[Creating datasets](#)

[Using Dataflows to extract and transform data](#)

[Creating visualizations](#)

[Creating reports and dashboards](#)

[Using Power BI with Power Platform](#)

[Using Power BI with Power Apps](#)

[Using Power BI with Power Automate](#)

[Summary](#)

[Questions](#)

[Further reading](#)

18. [AI Builder](#)

[Introducing AI Builder](#)

[Identifying AI Builder model types](#)

[Introducing AI Builder prebuilt models](#)

ExamLabs

- Building an AI Builder model
- Preparing data for a model
- Training and testing a model
- Using AI Builder models
- Consuming a model using canvas apps
- Consuming a model using model-driven apps
- Consuming a model using Power Automate
- Summary
- Questions
- Further reading

19. Microsoft 365 Integration

- Understanding integration with SharePoint
- Using Power Apps with Microsoft Teams
- Model-driven apps with Microsoft Teams
- Canvas apps with Microsoft Teams
- Project Oakdale
- Using Power Automate with Microsoft Teams
- Integrating Microsoft Teams with the Common Data Service
- Creating Word and Excel templates
- Email templates
- Excel templates
- Word templates
- Controlling access to templates
- Summary
- Questions
- Further reading

20. Application Life Cycle Management

- Working with solutions
- Working with unmanaged solutions
- Working with multiple solutions
- Using segmented solutions
- Using managed solutions
- Using managed properties
- Using the Solution checker
- Exporting and importing solutions
- Importing unmanaged solutions
- Importing managed solutions

ExamLabs

- Updating a managed solution
- Cloning solutions and patches
- Creating a solution patch
- Setting the version number for a solution patch
- Cloning solutions
- Importing a cloned solution
- Setting the version number for a cloned solution
- Summary
- Questions
- Further reading

21. Tips and Tricks

- Reviewing the exam objectives
- Revising for an exam
- Understanding how exams are structured
- Understanding the question types
- Preparing for the exam
- Tips when taking the exam

22. Practice Test 1

- Introducing the test
- Instructions for the test
- Practice test 1
- Section 1
- Scenario
- Question 1
- Question 2
- Question 3
- Section 2
- Question 4
- Question 5

Preface

Welcome to this guide to the Microsoft Power Platform Functional Consultant Exam, PL-200.

This guide will help you understand and prepare for the PL-200 exam; probably the most important exam for those involved in implementing solutions in the Power Platform and Dynamics 365 solutions. By reading this book, you will become familiar with the most important elements of the low-code aspects of the Power Platform and you will be well placed to take—and pass—this exam.

Passing the exam demonstrates that you have the skills required to customize solutions based on Dynamics 365 Customer Engagement and the Power Platform.

As I have been writing this book, the Power Platform has seen many changes, reflecting the investment Microsoft is making in business applications and the importance of the Power Platform to Microsoft. The impact of the Power Platform is making itself felt across the whole of the Microsoft product portfolio, with Power Apps now embedded in Microsoft Teams.

At the time of publishing, Microsoft Dataverse (formerly known as the Common Data Service) was undergoing a branding change. This branding change has not been completed and some screenshots in this book may reflect the former branding. Along with the name change, there are several changes to terminology such as tables (formerly entities), columns (formerly fields), rows (formerly records), choices (formerly option sets), and yes/no (formerly two options). These terminology changes will be applied to the user interface, documentation, and exam over time. You should be aware that the terms used in the book may not match the tools and documentation.

The book starts off with Dataverse (formerly known as the Common Data Service), where you create the data model that you will build your apps on. You will learn about business logic, security, automation, and other features that make Dataverse a great platform for building apps. Next, you will learn about creating and deploying apps, how to automate flows, and to build your own chatbots. The book then looks at using the Power Platform with other tools such as Power BI and Microsoft 365 services.

ExamLabs

Each chapter concludes with a *Further reading* section, which is a very important part of the book because it will give you extra and sometimes crucial information for passing the PL-200 exam. As the questions of the exam will change slightly over time and this book will eventually become outdated, the *Further reading* sections will be the place that provides access to all the updates.

What this book covers

[Chapter 1](#), *PL-200 Exam*, introduces the exam contents, the purpose of the exam, the skills measured, and who the exam is aimed at. This chapter will also look at how the PL-200 exam fits with the Dynamics 365 and Power Platform role-based certifications.

[Chapter 2](#), *Power Platform*, provides a high-level overview of the Power Platform and its components, examines the different Power Platform environments, and explains how to configure and administer environments.

[Chapter 3](#), *Data Modeling*, covers modifying the data model to meet business requirements, extending the schema for Dataverse with entities, relationships, and fields, and how to use solutions to manage your changes.

[Chapter 4](#), *Business Rules*, explains how to validate data, perform calculations, and manipulate fields on forms, all without the need to write JavaScript.

[Chapter 5](#), *Classic Workflows*, covers using classic workflow processes to automate data changes and communications using triggers, conditions, and action steps.

[Chapter 6](#), *Managing Data*, discusses the features for importing data into, and exporting data from, the Dataverse.

[Chapter 7](#), *Dataverse Settings*, covers the features for managing data once it is in Dataverse, including finding duplicates, cleansing data, how to remove stale data, and how to monitor and control data volumes.

[Chapter 8](#), *Security*, provides an overview of the available security features in the Power Platform and then examines the security features used most frequently in Power Platform solutions.

[Chapter 9](#), *Model-Driven Apps*, explains the components in model-driven apps and looks at how to configure forms, views, charts, and dashboards, before

ExamLabs

bringing the components together to create an app for business users.

[Chapter 10](#), *Canvas Apps*, explains how to create canvas apps for web and mobile users, add controls to apps, use multiple data sources, and deploy apps.

[Chapter 11](#), *Portal Apps*, covers the building of Portal apps to expose data in Dataverse to external users, customize the pages and layout, and add content.

[Chapter 12](#), *Power Automate Flows*, covers automating steps within the Power Platform and across cloud systems including Office 365, Azure, and third-party services, creating flows, using connectors, adding steps, using expressions, and using logic to control the actions a flow performs.

[Chapter 13](#), *Business Process Flows*, explains how to create business process flows to guide users through an end-to-end business process by adding stages, steps, and conditions, using branching, applying security, and using business process flows with other components of the Power Platform.

[Chapter 14](#), *UI Flows*, explains how you can automate user activities on legacy applications when there isn't an API available, by creating and running UI Flows.

[Chapter 15](#), *Creating Chatbots*, describes how to create, publish, and monitor Power Virtual Agents bots, and explains the key concepts involved in building chatbots.

[Chapter 16](#), *Configuring Chatbots*, describes how to configure and author your own chatbots using topics, entities, and variables, along with adding questions and responses to tailor your chatbot to your business scenario.

[Chapter 17](#), *Power BI*, describes how to create powerful visualizations, reports, and dashboards using the data captured in the Common Data Service (Dataverse).

[Chapter 18](#), *AI Builder*, explains to add **Artificial Intelligence (AI)** to your apps and flows with no code, explains the AI model types, shows how to

ExamLabs

build your own AI models, and demonstrates how to use prebuilt and custom models in Power Apps and Power Automate.

Chapter 19, Microsoft 365 Integration, explains how to configure and use the integration with Microsoft 365, Word, and Excel, along with how to create templates and how to use the Power Platform with Microsoft Teams.

Chapter 20, Application Life Cycle Management, describes the tools and processes around moving changes from development through testing to production environments using solutions.

Chapter 21, Tips and Tricks covers tried and tested strategies that will help improve the reader's capabilities to solve and manage the exam questions on D day. These tips and tricks will help readers prepare mentally to have a relatively less stressful exam.

Chapters 22-25, cover practice tests and their answers. It will enhance your understanding of the concepts by testing your knowledge and to help prepare yourself for the certification exam.

To get the most out of this book

A Power Platform environment is required to get the most out of this book. You can start a free 30-day trial at <https://www.microsoft.com/evalcenter/evaluate-power-platform>, or you can utilize the Power Platform Community Plan at <https://powerapps.microsoft.com/communityplan>

All you need is a modern browser, except for in [Chapter 14](#), *UI Flows*, where you will need a computer running Windows 10 Pro if you want to explore desktop UI flows.

Conventions used

There are a number of text conventions used throughout this book.

CodeInText: Indicates code words in text, database table names, folder names, filenames, file extensions, pathnames, dummy URLs, user input, and Twitter handles. Here is an example: "You should download the app as a .zip file."

Bold: Indicates a new term, an important word, or words that you see onscreen. For example, words in menus or dialog boxes appear in the text like this. Here is an example: "This specification is the **Common Data Model (CDM)**."

Warnings or important notes appear like this.

Tips and tricks appear like this.
